

Constructional Timber

**Manufacturers
Limited**

Generations of innovation with timber
engineered products

engineered solutions

Constructional Timber was founded in 1979 and specialises in the design, manufacture and erection of timber engineered structures. The company's reputation as a leading specialist in the industry has been earned through its quality of workmanship and innovative approach to design.

By combining know-how and can-do, the firm has built an industry leading reputation working on diverse projects ranging from private barn conversions to commercial projects in excess of £1 million.

Operating from two sites based in the UK, Constructional Timber is one of the largest independent companies of its kind.

With an unrivalled financial base providing an ability to fund projects large and small, the company also has the necessary experience to add value to every stage of a project's development from initial design to project management and construction.

The company has always been concerned about the environmental consequences of timber engineering and takes care to choose its timber from sustainable sources.

Our in-house services:

- Consultation on planning
- Feasibility studies
- Manufacture of timber structures and associated metalwork
- Site erection and project management

Services

Constructional Timber has an in-house resource of talented designers and project managers who work with time served tradesmen to ensure that every project is completed on time and on budget.

Over two decades of experience give customers peace of mind that every project is in safe hands.

The company can manage the quality of a project from inception to construction. Where other manufacturers may say no, Constructional Timber will do whatever it takes to make engineering impossibilities a reality.

products

Products can be tailored for every project. If you require anything from bespoke solutions to one of the widest ranges of standard stock in the industry, Constructional Timber can deliver.

From traditional oak framed buildings, solid section feature trusses and walkways, through to state of the art sports arenas, Constructional Timber has the track record to give clients the reassurance of knowing they are dealing with a company that has 'been there before'.

Using the highest quality materials Glulam beams can be supplied to almost any size and shape. Glulam applications include arches, portals, roof, lintel and floor beams, for columns rafters and A frames.

By choosing Glulam you can design a building and its structural members to suit the function and use without the need for individual protection and cladding. This can save time and cost and add a modern aesthetic dimension.

The product can be manufactured in spans of over 50 metres and is one of the strongest structural materials per unit weight. Glulam also has a high and predictable resistance to fire and will not corrode.

Product and service range designed and manufactured by Constructional Timber:

- Supply of straight stock sizes of European whitewood GL24 Glulam Beams
- Non-standard Glulam beams with curved and portal beams available in other species such as; European oak and beech, iroko and imported Douglas fir
- Trussed frameworks from medieval style oak or softwood King and Queen trusses to modern designs with steel plates or tie rods
- A wide range of portal frames for swimming pools and sports halls
- Supply of structural decking in a variety of thicknesses to form diaphragm roofs
- Preformed timber bridges.
- Gang Nail Trussed Rafters and Ecojoist flooring systems
- Flitched and ply web beams
- Pedestrian bridges and walkways

Whatever your requirement for timber engineering products, Constructional Timber can help. With over twenty year's experience in the industry you are assured of expertise in every aspect of the project.

Why choose Constructional Timber?

The company has earned respect in the industry by taking a pro-active approach to everything it does. By combining expertise and experience, Constructional Timber can add flexibility and quality to your project.

But don't take our word for it...

"We would have no hesitation in recommending Constructional Timber, the end result of the project is a credit to both our companies."

Mr J O'Connell, EW Beard, Sheepdrove Farm Biodiversity Centre

"A complex project, carried out competently at every stage of the build."

Mr M Armitage, Taylor Woodrow, Earth Centre

"We have returned to Constructional Timber on four projects now both here and abroad, that should speak for itself."

Mr R Web, RV Web, National Velodromes

If your project requires timber engineered structures, call Constructional Timber and benefit from a company that offers experience with award winning innovative design.
